Brief Introduction

This manual provides detailed instructions for setting up and using the ES20 scan engine.

Chapter Description

《Chapter 1 About ES20》	
《Chapter2 System Setting》	Introduces three configuration methods and describes how to configure general parameters
《Chapter3 Scan Mode》	Introduces different scan modes
《Chapter4 Interface》	Introduces different interfaces
《Chapter5 Output Digit》	Explains how to customize scanned data with the advanced data formatter.
《Chapter6 Symbologies》	Lists all compatible symbologies and describes how to configure the relevant parameters.
《Appendix》	Provides factory defaults table and a bunch of frequently used programming barcodes

Explanation of Icons

This icon indicates this information requires extra attention from the reader.

This icon indicates handy tips that can help you use or configure the engine with ease.

This icon indicates practical examples that can help you to acquaint yourself with operations.

Chapter 1 About ES20

Introduction

The ES20 scan engine is capable of scanning any 1D or 2D barcodes, no matter it's presented on a printed paper or a mobile phone screen.

Technical Datasheet*

Image sensor		640*480 CMOS
Illumination		White LED
Focusing		Red LED
Symbologies	2D	(PDF417)、(Micro PDF417)、(QR Code)、(Micro QR)、(Data Matrix)、(Aztec)、(Hanxi code)
	1D	(Codabar)、(Code 39)、(Code 32)、(Interleaved 2 of 5)、(Industrial 2 of 5)、(Matrix 2 of 5)、(Code 93)、(Code 11)、(Code 128)、(GS1-128)、(ISBT 128)、(UPC-A)、(UPC-E)、(EAN/JAN-8)、(EAN/JAN-13)、(Qlessey)、(GS1 DataBar(RSS14))、(Standard 2 of 5)、(Msiplessey)
Typical Decode Range	EAN-13 (13mil)	45mm~200mm (Size: 31mm*7mm)
	PDF417 (6mil)	30mm~135mm (Size: 14mm*7mm)
	Code39 (5mil)	40mm~120mm (Size: 27mm*8mm)
	Data Matrix (10mil)	30mm~140mm (Size: 5mm*5mm)
	QR Code (15mil)	30mm~200mm (Size: 10mm*10mm)
Symbol Contrast*		≥20% Minimum Reflectance Difference
FOV		L 41°, V 31°
Interface		TTL、USB
Dimension(mm)		22(W)×14.5(D)×11.7(H)
Working Voltage		3.3 VDC±5%
Power consumption		810mW(Typical value)
Electric current @3.3 VDC	Working	245mA(RMS Typical value), 320mA(RMS Max)
	Standby	30mA
Operating Temperature		-10°C~+60°C
Storage Temperature		-40°C~+70°C
Operating Humidity		5%~95% (No condensation)
Ambient Light		0~100,000LUX

FOV of ES20

Pin Description

The physical interface of ES20 is 12-PIN FPC interface. 12-PIN FPC can be multiplexed into two communication interface: TTL-232 communication interface and USB communication interface. Figure below shows the position of the 12-PIN FPC interface on the ES20 decoder board. The PIN 1 and PIN12 positions on the 12-PIN FPC are also marked, PIN 1 ~ PIN 12 in order.

12pin FPC Connector

Pin out Description

PIN#	Signal Name	I/O Type	Description
1	NC	-	Null
2	VIN	-	Power Input+3.3V
3	GND	-	Ground
4	RXD	I	TTL receive
5	TXD	O	TTL Transmit
6	USB_DN	I/O	USB D-Signal
7	USB_DP	I/O	USB D+Signal
8	PIN 8	-	-
9	Buz	O	Beeper Output
10	LED	O	Good Read LED Output
11	nRESET	I	Reset Input
12	nTRIG	I	Trigger

Dimension:(mm)

Maintenance

- * The window must be kept clean, the supplier do not bear the guarantee. responsibility due to the improper maintenance.
- * Avoid the window being wear and tear or scratched by hard object.

-
- * Use the hairbrush to remove the stain on the window.
 - * Clean the window with a soft cloth, such as lens cleaning cloth.
 - * Spraying liquid onto the window is prohibited.
 - * Prohibit any cleaning solvents, except for the cleaning water.

Scanning Skill

If the barcode is small, it should be closer to the scanning window; if the barcode is large, it should be far away from the scanning window a little more, thus easier to be read correctly. If the barcode is highly reflective (for example, the coated surface), you may need to tilt the barcode at an angle to successfully scan it.

Chapter2 System Setting

Introduction

The ES20 can be configured by scanning programming barcodes. All user programmable features/options are described along with their programming barcodes/commands in the following sections. This programming method is most straightforward. However, it requires manually scanning barcodes. As a result, errors are more likely to occur.

Programming Barcode

The figure above is an example that shows you the programming barcode for the Enter Setup function:

1. The programming barcode.
2. The description of feature/function.

Use of Programming Code

Scanning the **Enter Setup** barcode can enable the engine to enter the setup mode.

Then you can scan a number of programming barcodes to configure your engine. To exit the setup mode, scan the **Exit Setup** barcode or a non-programing barcode, or reboot the engine

Enter Setup (default)

Exit Setup

Restore Factory Default

Restore Factory Default

Inquiry Firmware Version

Inquiry Firmware Version

User Preference

User can set up his/her preference of the scanner.

Save User Preference

Restore to User Preference Default

Reread Timeout

Reread Timeout can avoid undesired rereading of same barcode in a given period of time.

This feature is only applicable to the Sense and Continuous modes.

It's programmable as 500ms, 750ms, 1s and 2s, 500ms is the default value.

500ms (default)

750ms

1s

2s

Beeper

The scanner issues different beeps to indicate status: Good-Read Beep, Error Beep, Startup Beep and Programming Beep.

Beeper Volume

For setting up Good Read Beep and Error Beep only.

High Volume (default)

Low Volume

Startup Beep

The engine can be programmed to beep when it is powered on. Scan the **Off** barcode if you do not want a power on beep.

On (default)

Off

Beeper On/Off

Setting for "Good Read-Beep" and Error Beep"

On (default)

Off

Beeper Tone-Good Read

Low Tone (default)

Medium Tone

High Tone

Beeper Duration - Good Read and Error

Long Duration (default)

Short Duration

Beeper Tone-Error

Low Tone (default)

Medium Tone

High Tone

LED Illumination

Normal (default) : LED on engine are turned on during image capture;

Always on: Illumination LED on the engine keep on after the engine is powered on.

Always off: Illumination LED on the engine are off all the time

Normal (default)

Always on

Always off

Aimer

Normal (default) : The engine projects an aiming pattern only during barcode scanning/capture.

Always On: Aiming pattern is constantly on after the engine is powered on.

Off: Aiming pattern is off all the time.

Normal (default)

Always on

Always off

Good Read LED

The LED can be programmed to be On or Off to indicate good read.

On (default)

Off

Vibration (Not Enabled)

Firmware Upgrade

Please connect the scanner with a USB cable for firmware upgrade.

Firmware Upgrade

Example

Steps to upgrade firmware:

1. Plug the scanner with a USB cable;
2. Scan **Firmware Upgrade** barcode to enter USB driver mode and wait for USB driver showing up on the computer;
3. Copy the firmware file into the USB driver;
4. Eject the USB driver and replug the usb cable to restart up the scanner and the scanner will start the firmware upgrade procedure.
5. The scanner beeps after firmware upgrading.

If the upgrade is successful, the factory settings will be restored, and

users can reset the scanner according to their needs.

ATT

If the upgrade fails, you need to re-power on and restart the scanner and perform the above upgrade steps again.

Image Capture (Not Enabled)

Auto Sleep Mode

Enable/Disable Auto Sleep Mode

The auto sleep mode can be set up only when the scanner is under Level Mode. Auto Sleep allows the engine to automatically enter the sleep mode if no operation or communication is performed for a time period (user programmable). Sending trigger signal can awake the engine. The default setting is 5s.

When the scanner is under USB-keyboard interface and awake from auto sleep mode, it will not transmit any decoded data until it's re powered on.

Disable (default)

Enable

Enter Sleep Mode

Enter Sleep Mode Now

Set Time Period from Idle to Sleep

The following parameter sets how long the engine remains idle (no operation or communication occurs) before it is put into sleep mode. It is programmable in 1s increments from 1s to 3600s.

Time Period from Idle to Sleep

Example

Set Time Period from Idle to Sleep to '10s'(default: 5s)

1. Scan **Time Period from Idle to Sleep** barcode.
2. Scan numeric barcode "1" "0" from the "Digital barcodes" section in Appendix 1.
3. Scan **Save** barcode in Appendix 1

Chapter 3 Scan Mode

Sense Mode (default)

Sense Mode

The engine activates a decode session every time it detects a barcode presented to it.

The decode session continues until a barcode is decoded or the decode session

timeout expires. **Reread Timeout** can avoid undesired rereading of same barcode in a given period of time.

Sense Mode

Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable from 3s to 10s. The default setting is 3s.

Short (default)

Medium

Long

Custom Decode Session Timeout

Set custom decode session timeout

It's programmable in 0.1s increments from 1 to 999. The default setting is 3s.

Set Custom Decode Session Timeout

Example

Set the decode session timeout to 10s:

- 1、 Scan **Set Custom Decode Session Timeout** Barcode
- 2、 Scan the numeric barcodes: "1"0" from the "Digital barcodes" section in Appendix1.
- 3、 Scan the **Save** barocde in Appendix1

Good Read Illumination LED Duration

This parameter sets the amount of time that the Good Read LED to remain on following a good read.

It's programmable as Short, Medium and Long, corresponding to 3s, 7s and 10s. The default setting is 0s.

Short

Medium

Long

Set up Custom Duration

Set Custom Good Read Illumination LED Duration

This parameter sets the amount of custom time that the Good Read LED to remain on following a good read. It is programmable in 0.1s increments from 1 to 999.

Set Custom Good Read Illumination LED Duration

Example

Set the custom duration as 10s:

- 1、 Scan **Set Custom Good Read LED Duration** Barcode.
- 2、 Scan numeric barcode "1" "0" from the "Digital Barcodes" section in Appendix1
- 3、 Scan **Save** barcode in Appendix 1

Manual Trigger Mode

A trigger pull activates a decode session. The decode session continues until a barcode is decoded or you release the trigger.

Manual Trigger Mode

Continuous Mode

The engine automatically starts one decode session after another. To suspend/resume barcode reading, simply press the trigger. **Reread Timeout** can avoid undesired rereading of same barcode in a given period of time.

Continuous Mode

Chapter Communication Interface

USB Interface

USB HID (default)

When the engine is connected to the USB port on a host device, you can enable the USB HID Keyboard feature by scanning the barcode below. Then engine's transmission will be simulated as USB keyboard input. The Host receives keystrokes on the virtual keyboard. It works on a Plug and Play basis and no driver is required.

USB HID

USB HID Data Upload Method

Before turning on this function, make sure that "USB HID Mode" is turned on.

PC Software

USB-Keybaord (default)

Both PC Software and USB-Keybaord

Function Key Mapping

This setting is aimed for USB-Keyboards Mode. Please Refer to Appendix 《ASCII Table》.

Disable (default)

Function Key GS Replace

Do not replace (default)

Replace as Ç

Replace as |

Replace as ^]

Replace as]

Replace as <GS>

Virtual Keyboard

Virtual keyboard Enable (mode one): The characters between 0x20 ~ 0xFF are output using the virtual keyboard which is not supported under the current keyboard layout, and the characters between 0x00 ~ 0x1F are output according to the definition of control characters.

Virtual keyboard Enable (mode two): All characters between 0x20 and 0xFF are output using virtual keyboard, and characters between 0x00 and 0x1F are output according to the definition of control characters.

Virtual keyboard Enable (mode three): All characters used between 0x00 and 0xFF are output using virtual keyboard.

Disable Virtual Keyboard (default)

Enable Virtual Keyboard (Mode 1)

Enable Virtual Keyboard (Mode 2)

Enable Virtual Keyboard (Mode 3)

USB-Keybaord Transmit Speed

Low Speed

Medium Speed

High Speed (default)

Set Custom Speed

Set Custom Transmission Speed

The transmission speed can be set up from 2ms to 50ms.

Set Custom Transmission Speed (default 10ms)

Example

Set custom transmission speed to 10ms:

1. Scan **Set Custom Transmission Speed** barcode.
2. Scan numeric barcode "1" "0" from the "Digital Barcodes" section in appendix 1.
3. Scan **Save** barcode in appendix 1.

When Barcode contains 0A and 0D; Carriage Return and Line Feed

Only 0A outputs Line Feed

Only 0D output Line Feed (default)

Both 0A and 0D output Line Feed

USB CDC

USB CDC

TTL- 232 Interface

Serial communication interface is usually used when connecting the engine to a host device (like PC, POS). However, to ensure smooth communication and accuracy of data, you need to set communication parameters (including baud rate, parity check, data bit and stop bit) to match the host device

TTL

RS485 (Not Enabled)

RS485 Device ID (Not Enabled)

Baud Rate

Baud rate is the number of bits of data transmitted per second. Set the baud rate to match the host requirements. Default is 9600bps.

Baud Rate4800

Baud Rate9600

Baud Rate19200

Baud Rate38400

Baud Rate57600

Baud Rate115200

Parity Check

Set the parity type to match the host requirements.

Odd Parity: If the data contains an odd number of 1 bits, the parity bit value is set to 0.

Even Parity: If the data contains an even number of 1 bits, the parity bit value is set to 0.

None: Select this option when no parity bit is required.

Stop Bit: The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. Set the number of stop bits to match the host requirements.

Data Bit8, Stop Bit1, No Parity (default)

Data Bit8, Stop Bit1, Odd Parity

Data Bit8, Stop Bit1, Even Parity

Data Bit8, Stop Bit2, No Parity

Data Bit8, Stop Bit2, Odd Parity

Data Bit8, Stop Bit2, Even Parity

Wiegand Interface (Not Enabled)

Chapter 5 Data Format

Custom Prefix

Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 10 characters. For example, if the custom prefix is "AB" and the barcode data is "123", the Host will receive "AB123".

Enable Custom Prefix

Disable Custom Prefix (default)

Restore All Custom Prefix

Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode then the numeric barcodes corresponding to the hexadecimal value of a desired prefix then the **Save** barcode.

Set Custom Prefix

Example

Set custom prefix "a" (Hex value is 0x61) to all symbologies(CODE ID value is 0x99)

- 1.. Scan **Set Custom Prefix** barcode.
- 2.. Scan numeric barcode "9961" from the "Digital Barcodes" section in Appendix 1
3. Scan **Save** barcode in Appendix 1
4. Scan **Enable Custom Prefix** barcode.

Custom Suffix

Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that cannot exceed 10 characters. For example, if the custom suffix is "AB" and the barcode data is "123", the Host will receive "123AB".

Enable Custom Suffix

Disable Custom Suffix (default)

Restore All Custom Suffix

Set Custom Suffix

To set a custom prefix, scan the **Set Custom Suffix** barcode then the numeric barcodes corresponding to the hexadecimal value of a desired prefix then the **Save** barcode.

Set Custom Suffix

Example

Set custom suffix "a" (Hex value is 0x61) to all symbologies(CODE ID value is 0x99)

- 1.. Scan **Set Custom Suffix** barcode.
- 2.. Scan numeric barcode "9"9"6"1" from the "Digital Barcodes" section in Appendix 1
3. Scan **Save** barcode in Appendix 1
4. Scan **Enable Custom Suffix** barcode.

CODE ID

Code ID can also be used to identify barcode type. Unlike AIM ID, Code ID is user programmable. Code ID can only consist of one letters.

CODE ID Selection

CODE ID Prefix: CODE ID before barcode

CODE ID Suffix: CODE ID after barcode

Enable CODE ID (default)

CODE ID Prefix

CODE ID Suffix

Restore All CODE ID

Restore All CODE ID

Set Custom CODE ID

Set Custom CODE ID

Example

Modify Codabar (CODE ID:0x61) CODE ID to be "Y" (Hex: 0x59) :

1.Scan Set Custom CODE ID barcode

2. Scan numeric barcode "6""1""5""9" from the "Digital Barcodes" section in Appendix 1

3. Scan **Save** barcode in Appendix 1

AIM ID

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the "AIM ID Table" section in Appendix). If AIM ID prefix is enabled, the engine will add the symbology identifier before or after the scanned data after decoding

AIM ID is not user programmable

Disable AIM ID (default) : Do Not output AIM ID.

AIM ID Prefix: AIM ID before scanned data.

AIM ID Suffix: AIM ID after scanned data.

Disable AIM ID (default)

Enable AIM ID Prefix

Enable AIM ID Suffix

Start Character

No Start Character (default)

Set Start Character as STX

Terminating Character Suffix

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF) can only be used to mark the end of data, which means nothing can be added after it.

Set Terminating Character Suffix to CR
(default)

Set Terminating Character Suffix to LF

Set Terminating Character Suffix to CRLF

Set Terminating Character Suffix to LAB

Set Terminating Character Suffix to ETX

Disable Terminating Character Suffix

Prefix/Suffix Sequence

Prefix Sequence

Start Character+CODE ID+AIM ID+Custom Prefix (default)

Start Character+Custom Prefix+CODE ID+AIM ID

Suffix Sequence

Custom Suffix+CODE ID+AIM ID+Terminating Character (default)

CODE ID+AIM ID+Custom Suffix+Terminating Character

Convert Case

No Convert Case (default)

Convert Case

Convert All to Lower Case

Convert All to Upper Case

Data Formatter

Prefix or suffix will be outputted regularly.

Data output selection

Transmit Original data (default): The barcode data will not be modified.

Transmit Start-Field : Only transmit the start-Field data and the length will be set up by **Set Length for Start Field** barcode. If the set length is greater than the length of the read character string, the original data will be transmitted. For example: if the string "1234567890" is read and the length is set to 3, the final output data is "123".

Transmit Middle Field: Only transmit the Middle Field and the length will be set up by **Set length for Start Field** barcode and **Set Length for End Field** barcode. If the sum of the two length values is greater than the length of the read character string, the output is empty. For example: if the character string "1234567890" is read, and the start/end field lengths are set to 3 and 4 respectively, the final output data is "456".

Transmit End Filed: Only transmit the End-Field data and the length will be set up by **Set Length for End Field** barcode.. If the set length is greater than the length of the read character string, the original data will be output. For example: if the character string "1234567890" is read and the length is set to 3, the final output data is "890".

Transmit Start Field and end Field: The transmitted data is limited according to the data of "Set Length for Start-Filed" and "Set Length for End-Field". If the sum of the two length values is greater than the length of the read character string, the original data will be transmitted. For example: if the character string "1234567890" is read, and the start/end field lengths are set to 3 and 4 respectively, the final transmitted data is "1237890".。

Original Data(default)

Transmit Start-Field Data

Transmit Middle Field

Transmit End Filed

Transmit Start Field and End Filed

Set Length Range for Start/End Filed

Default value is 1, Range: 1 ~ 7900. When it is set up to be 0, this function will be invalid.

Example: Set Start Field Length as 12

1. Scan **Set Length Range for Start Field** barcode.
2. Scan numeric barcode "1"2" from the Digital Barcodes section in Appendix 1.
3. Scan **Save** barcode in Appendix 1.

Set Length Range for Start Field

Set Length Range for End Field

Clean Cache Data (Not Enabled)

Inquiry Decoded Data (Not Enabled)

Chapter 6 Symbologies

Introduction

Every symbology (barcode type) has its own unique attributes. This chapter provides programming barcodes for configuring the engine so that it can identify various symbologies. It is recommended to disable those that are rarely used to increase the efficiency of the engine.

Enable/Disable All Symbologies

If the **Disable All Symbologies** feature is enabled, the engine will not be able to read any non-programming barcodes except the programming barcodes.

Enable All Symbologies

Disable All Symbologies

Enable/Disable All 1D Symbologies

Enable All 1D Symbologies

Disable All 1D Symbologies

Enable/Disable All 2D Symbologies

Enable All 2D Symbologies

Disable All 2D Symbologies

Inverse BarCode

Only Decode Regular BarCodes (default)

Decode Regular and Inverse BarCodes Both

Tips

Only Decode Inverse Barcode (Not Enabled)

Codabar

Enable/Disable Codabar

Enable (default)

Disable

Codabar Start/Ending Character

Enable

Disable (default)

Set Length Range for Codabar

ATT

Any 1D barcode length can not exceed 127 characters. If minimum length is set to be greater than maximum length, the engine only decodes Codabar barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Codabar barcodes with that length are to be decoded.

Set the Minimum

Set the Maximum Length

Example

Set the scanner to decode Codabar barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcode "8" from the "Digit Barcodes"

tion in Appendix.

3. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

4. Scan the **Set the Maximum Length** barcode.

5. Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.

6. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Code 39 Check Digit

Disable Check Digit (default)

Enable and do not transmit check digit

Enable and transmit check digit

Code 39 Full ASCII

Disable (default)

Enable

Set Length Range for Code 39

Set the Minimum

Set the Maximum Length

Example

Set the scanner to decode Code39 barcodes containing between 8 and 12 characters:

7. Scan the **Set the Minimum Length** barcode.
8. Scan the numeric barcode "8" from the "Digit Barcodes" section in Appendix.
9. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
10. Scan the **Set the Maximum Length** barcode.
11. Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.
12. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Code 32

To enable code32, code39 need to be enabled first.

Set Custom Length for ITF5

Set Length Range for Interleaved 2 of 5

Need to scan **Set Custom Length for ITF5** barcode first

Set the Minimum Length (4~128)

Set the Maximum Length (4~128)

Example

Set the scanner to decode ITF25 barcodes containing between 8 and 12 characters:

- 1.Scan the **Set the Minimum Length** barcode.
- 2.Scan the numeric barcode "8" from the "Digit Barcodes" section in Appendix.
- 3.Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
- 4.Scan the **Set the Maximum Length** barcode.
- 5.Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.
- 6.Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Industrial 2 of 5

Enable/Disable Industrial 2 of 5

Enable (default)

Disable

Set Length Range for Industrial 2 of 5

Set the Minimum Length (4~128)

Set the Maximum Length (4~128)

Example

Set the scanner to decode Industrial 2 of 5 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcode "8" from the "Digit Barcodes" section in Appendix.
3. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

-
4. Scan the **Set the Maximum Length** barcode.
 5. Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.
 6. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Matrix 2 of 5

Enable/Disable Matrix 2 of 5

Enable (default)

Disable

Set Length Range for Matrix 2 of 5

Set the Minimum Length (4~128)

Set the Maximum Length (4~128)

Example

Set the scanner to decode Matrix 2 of 5 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcode "8" from the "Digit Barcodes" section in Appendix.

3.Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

4.Scan the **Set the Maximum Length** barcode.

5.Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.

6.Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Code 93

Enable/Disable Code 93

Enable (default)

Disable

Set Length for Code 93

Set the Minimum Length (1~127)

Set the Maximum Length (1~127)

Example

Set the scanner to decode Code93 barcodes containing between 8 and 12 characters:

1.Scan the **Set the Minimum Length** barcode.

2.Scan the numeric barcode "8" from the "Digit Barcodes" section in Appendix.

3.Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

4.Scan the **Set the Maximum Length** barcode.

5.Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.

6.Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Code 11

Enable/Disable Code 11

Enable

Disable (default)

Code 11 Check Digit Transmission

Transmit Code 11 Check Digit

Do not Transmit Code 11 Check Digit (default)

Code 11 Check Digit

Disable Check Digit (default)

One Check Digit

Two Check Digit

Set Length Range for Code 11

Set the Minimum Length (1~127)

Set the Maximum Length (1~127)

Example

Set the scanner to decode Code 11 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcode "8" from the "Digit Barcodes" section in Appendix.
3. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
4. Scan the **Set the Maximum Length** barcode.
5. Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.

6. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Code 128

Enable/Disable Code 128

Enable (default)

Disable

Set Length Range for Code 128

Set the Minimum Length (1~127)

Set the Maximum Length (1~127)

Example

Set the scanner to decode Code 129 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcode "8" from the "Digit Barcodes" section in Appendix.
3. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
4. Scan the **Set the Maximum Length** barcode.

5. Scan the numeric barcodes "1" and "2" from the "Digit Barcodes" section in Appendix.

6. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.

Appendix3 Command Format Description

Head	DEV ID	CMD	Status	Package No.	Data Length	Data	CRC16	End
2byte	1 byte	3 byte	1 byte	2 byte	2 byte	N byte	2 byte	2 byte
0x0057								0x4150
Description	1.For multi-byte data types, the low byte is before the high byte (little endian mode), (for example, the data length of 2 bytes is 0x0001, and the actual sending order is 01 00 instead of 00 01). The maximum length of the command is 64byte. If a command with a length greater than 64byte is sent, it will be sent in packets.							
	2.head: The Master is 0x57 0x00, and the Slave is 0x31 0x00.							
	3.DEV ID: The default value is 0x00, which is used to distinguish different devices in the 485 serial port multi-machine communication							
	CMD	[23:16]	《二、菜单设置条码》“一级菜单”栏的最后一位数字，内容空则为 0。					
		[15:8]	《二、菜单设置条码》“二级菜单”栏的最后一位数字，内容空则为 0。					
		[7:0]	《二、菜单设置条码》“三级菜单”栏的最后一位数字，内容空则为 0。					
	CMD	[7:4]	When the value is 0x0, the Command is a Programming Command。					
			When the value is 0x1, the Command is a Inquiry Command。					
	Status:	[3:0]	When the value is 0x0, Command is normal.					
			When the value is 0x1, Command is abnormal.					
	6.Package No.: Initial value is 0x00, and it will increase with the number of packets sent during sub-packet transmission.							
	7. Data length: the length of the data segment in the current command. If the total length of							

	the last command is set to 64byte, the packet label needs to be increased by 1 and then a supplementary command with a data length of 0byte is used to determine that the communication has ended. . If the get status command gets 64bytes, the packet label number needs to be increased by 1 and then another get command is issued to determine whether the communication has ended.
	8.Data: The data content is determined by the corresponding instruction number. When the data length is 0byte, there is no need to fill in the content of this section.
	9.CRC16: CRC16 check is to perform CRC16 check on all data between the beginning of the packet header and before the CRC16 check. The verification is carried out in byte order starting from the packet header. Online calculation of CRC check: https://www.lammertbies.nl/comm/info/crc-calculation, check data type is Hex, parameter model select CRC-16/IBM
	10.End of packet: 0x50 0x41, used to determine the end of the command transmission.

Appendix4 ASCII Character and Keystroke Table

Char	HEX	ASCII Character	Value	Keystroke
